

Dahyun Joo

Fulbright Scholar | +82-10-2647-9797 | clairda@snu.ac.kr | springfall137.github.io | Republic of Korea

ACADEMIC BACKGROUND

Seoul National University

2025 – Present

M.S. Course, Mechanical Engineering, GPA 4.0/4.0

- AI-driven Simulation and Design Lab (Principal Investigator: Prof. Do-Nyun Kim)

Seoul National University

2019 – 2025

B.S. Physics (Minor: Mechanical Engineering), Cum Laude

- Thesis: *wPINNs: Enhancing Physics-Informed Neural Networks with Wavelet Activation Functions*
*Compulsory Military Service (Jul. 2021 – Apr. 2023, Republic of Korea Air Force)

Chungnam Science High School

2016 – 2019

R&E at Physics Student Group, Valedictorian

RESEARCH EXPERIENCE

M.S. Researcher

Mar 2025 – Present

SNU AI-driven Simulation and Design Lab (Prof. Do-Nyun Kim)

- Develop reusable kirigami-based impact absorbers by engineering geometry-driven **negative-to-positive stiffness transitions** and energy absorption for repeatable deformation without material damage.
- Build simulation-to-design pipelines (e.g., **FEA**, parametric modeling, optimization loops) to map pattern parameters to force-displacement response and impact performance.
- Develop an **explainable ten-qubit quantum neural network** for multi-material topology optimization, with transfer to unseen loading conditions, higher-resolution meshes, and voxel-wise 3D problems.

Undergraduate Research Intern

Sep 2024 – Jan 2025

SNU MetaStructure Lab (Prof. J. H. Oh)

- Studied **waves and metamaterials** using acoustic finite element analysis and supported AI-driven topology-optimization simulations and design iterations.

Undergraduate Research Intern

Oct 2023 – Jan 2024

SNU Transformative Architecture Laboratory (Prof. J. K. Yang)

- Performed Abaqus FEA of **deployable bistable dodecahedral origami** to assess fabrication feasibility and guide design iteration.

PUBLICATIONS

D. Joo, Y. Miyazawa, S. Hong, D. Lee, J. K. Yang, D.-N. Kim, *Kirigami Meta-Sheet for Enhanced Impact Absorption*. **Under Review**; arXiv:2609.08362 [cs.CE], 2026.

- Introduces a planar, enhanced kirigami impact absorber that dissipates local impacts through distributed deformation and transitions between positive- and negative-stiffness regimes, validated through experiments, finite-element simulations, and reduced-order modeling.

D. Joo, N. Sukulthanasorn, K. Terada, D.-N. Kim, *Explainable Quantum Neural Networks for Multi-Material Topology Optimization*. **In Revision**; arXiv:2607.00438 [cs.CE], 2026.

- Develops a ten-qubit explainable quantum neural network that predicts structural layouts and material assignments from multi-material topology-optimization histories, generalizing to unseen loading conditions, higher-resolution meshes, and voxel-wise 3D problems while retaining auditable observable channels.

CONFERENCE PRESENTATIONS

D. Joo, Y. Miyazawa, S. Hong, D. Lee, J. K. Yang, D.-N. Kim, *Planar Kirigami Impact-Mitigation Sheet with Geometrically Tuned Stiffness Transitions*. **Oral**, KSME Annual Meeting 2026, Nov. 11 – 14, 2026.

D. Joo, N. Sukulthanasorn, K. Terada, D.-N. Kim, *Transferable Multi-Material Topology Prediction with Mechanics-Interpretable Quantum Observables*. **Poster**, 12th Korea Multi-Scale Mechanics Symposium (KMSM 2026), Aug. 13 – 14, 2026.

PROJECTS

Samsung Display <i>AI-driven Pattern Discovery for Improved Hinge Deformation Behavior</i> Built an automated 2D modeling–simulation workflow over unit-cell and hinge geometries, generating AI-training datasets and a surrogate model for hinge-strain prediction and geometry selection.	2026.03 – 2027.02
Samsung Display <i>Bistable Kirigami Integration for Curved Display Corner</i> Integrated and parameterized bistable kirigami patterns for controlled shape transition under corner-curvature, boundary, manufacturability, and repeatability constraints.	2025.03 – 2026.02
LG Electronics <i>Kirigami-Enhanced Pulp-Mold Packaging for Impact Absorption</i> Developed kirigami-enhanced pulp-mold packaging concepts and practical pattern guidelines for improved impact absorption under large-scale forming constraints.	2025.06 – 2025.09

AWARDS

★ Principal Candidate for a 2027 Fulbright U.S.-Korea Presidential STEM Initiative Award for graduate studies	2026
STOB League: Semiconductor Solverton Competition, Top Prize - Deputy Prime Minister and Education Minister Prize. - Optimized GAA nanosheet FET AC performance using structural modeling and TCAD; analyzed resistance, capacitance, and frequency gain relative to FinFET.	2024
Seoul National University Semiconductor Specialized College Scholarship	2024
ROKAF Entrepreneurship Contest: Advanced to MND Finals	2022
Excellent Private Award (ROK Air Force Information Communication School Principal)	2021
Excellent Student Award (Chungcheongnam-do Federation of Teachers' Association)	2019

PATENTS

Samsung Display, D.-N. Kim, **D. Joo**, G. Yun, K. Jung, *Bistable Metapatterns with Dome Geometry and Optimal Design Method*, patent pending.

SEMINAR

Seminar Instructor (Reinforcement Learning) <i>SNU BI Lab (Prof. Byoung-Tak Zhang)</i> Presented reinforcement-learning concepts and game-theoretic foundations, including minimax decision-making, Nash equilibrium, and links to policy/value learning, for an interdisciplinary audience.	Jan 2024
--	----------

PROFESSIONAL EXPERIENCE

Intern — K-Startup Center Paris at STATION F	2025.02
Intern — Thales Korea	2024.03 – 2024.07
Working Scholar — SNU Gwanak Residence Halls Administrative Office	2024.01 – 2024.02
Content Creator — @biztorang & @jjuvoyager	2022.10 – 2023.08
Sergeant (Completed Service) — Republic of Korea Air Force (15th Weather Squadron) Developed leadership and operational-coordination skills in a high-responsibility environment.	2021.07 – 2023.04
President of Student Council — SNU Department of Physics and Astronomy Led student representation and cross-group coordination.	2020.11 – 2021.07
Working Scholar — Center for Theoretical Physics, SNU Department of Physics and Astronomy	2020.03 – 2021.06
Brand Owner / Online Retail Sales — jjooda & DogodoNongwon	2020.04 – 2023.05
CFD Engineer — Rocket pre-startup Kspace (Injector Design)	2019.12 – 2020.02

SKILLS

Languages: Korean (Native), English (TOEFL 104; GRE V155/Q170/AW4.0), French (DELFI A2)
Programming: C, Python, MATLAB, R | **Programs:** ABAQUS, ANSYS, NX, STAR-CCM+, SolidWorks, COMSOL, KeyShot, Cura
Fabrication / Testing: FDM, SLA and metal 3D printing; ARAMIS 2.3M DIC, GOM Correlate; laser cutting; UTM; milling
